

AT/01/TB Miniature Piezoelectric Triaxial Accelerometer

2pC/g nom. 8.3gm 200°C Max Temp.

A lightweight miniature charge output triaxial vibration transducer with a single 4 pin connector, this is a unique design from DJB and comprises three charge output piezo-electric accelerometer elements mounted orthogonally within a titanium block. The use of the Konic Shear® independent sensing elements ensures a rugged and repeatable triaxial measurement under the most extreme conditions.

The AT/01/TB uses high temperature piezoceramics as standard to ensure thermal stability. Using the industry standard 1/4-28 UNF 4 pin connector for a single cable connection, the AT/01 must be used with DJB's unique low noise 4 core cable assemblies to reduce triboelectric noise effects. The AT/01/TB has a tapped base for stud mounting.
